

FLASHBOX

DDoS PROTECTION: Hybrid DDoS Protection

Protect and secure your business against DDoS attacks.

Flashbox's on premises security solution combined with our unique web application and security protection platform in the cloud provides the most comprehensive DDoS defense against all kinds of attack vector.

Distributed Denial of Service (DDoS) attacks of all kinds are on the rise. A scalable network is an essential tool in mitigating the impact of volumetric attacks, which have become ever more frequent and recently hit record sizes. Hackers are also increasingly focusing their attention on the application layer (layer 7) and deploying ever more sophisticated methods to take down websites, applications and infrastructure.

The hourly cost of downtime from DDoS failure averages out at \$100,000 per hour. Downtime or slow speeds caused by DDoS attacks causes damage to reputation, customer churn and lost business. Secure your business with our hybrid protection offering.

Why Flashbox's Hybrid Solution for your DDoS Protection?

- Utilize the most comprehensive protection possible: combining a purpose-built on-premises DDoS solution with the scale that DDoS protection for public and private cloud applications can offer
- Benefit from maximum analytics and human expertise plus immediate intervention at the time of threat detection
- Real-time zero latency mitigation on the ground so DDoS attacks can be detected and re-routed immediately
- Protect all aspects of your business from every kind of threat, including multi-vector, volumetric & application layer attacks
- Our team of DDoS experts will help you manage your hybrid protection solution directly from the ASO console

Key Benefits

- Comprehensive DDoS Protection 
- Purpose-Built DDoS Protection On Premises 
- Scalable DDoS Protection in the Cloud
- Real-time, Zero Latency Mitigation
- Deep Human Expertise & Intervention
- Cutting-Edge Mitigation Technologies

FLASHBOX HYBRID PROTECTION

For clients that require on-premises appliances for compliance reasons and/or have stricter security requirements, but would still like to leverage a high capacity, global infrastructure specifically designed for protection against volumetric attacks, Flashbox can deliver a hybrid deployment. We will help you design, plan and procure a hybrid solution with on-premises appliances and the most up-to-date cloud-based protection either deploying our Application Security Overlay (ASO) and/or selecting from best-of-breed vendors, such as Arbor, Radware, F5 and others.

Attacks today frequently blend attack vectors that are run simultaneously in order to discern – and exploit – the vulnerabilities in your infrastructure, whether that’s the network bandwidth, or your applications security. Different types of attack are best handled using different methods. Through deploying a hybrid approach, you can protect your business against all kinds of security threat without leaving your data or applications vulnerable to downtime, data breach or other kinds of attack.

Our hybrid mitigation offers comprehensive protection for the application, the data center, the cloud and your network infrastructure. Flashbox’s experienced team of experts will configure your devices.

You will be able to manage your hybrid protection service from the ASO console, allowing you full visibility of your own traffic and DDoS attack metrics, and the options to customize DDoS mitigation policies, manage DNS and initiate automated responses based on your business needs.

ABOUT FLASHBOX

Here at Flashbox, we **offer real-time threat detection and proactive monitoring** with personalized enterprise control. With precise threat assessments and timely responses, **Flashbox has only one mission: to keep your data safe and secure, 365/24/7.**

Other Flashbox Options

Cloud Protection

Benefit from our singular cloud protection solution underpinned by AWS’ global infrastructure. Protect your website, infrastructure & applications at scale.

On Premises Protection

Protect your business’ critical services with zero latency.

Professional Management & Planning Services

Let our team of experts manage your top-level DDoS solution. Our professional services can help you design, procure, budget, implement and manage your needs.
