

FLASHBOX

DDoS PROTECTION: On Premises Protection

Protect and secure your business against DDoS attacks.

Flashbox's on premises security solution provides automated DDoS defense and expert mitigation from all kinds of DDoS threat. The frequency and intensity of Distributed Denial of Service (DDoS) attacks is on the rise. Recent botnets have set record sizes for attacks, and renting a DDoS-for-hire has never been easier.

Hackers are also increasingly focusing their attention on the application layer (layer 7) and deploying more sophisticated methods to take down websites and applications. New such strategies and methods are being developed and put to work all the time.

The hourly cost of downtime from DDoS failure averages out at \$100,000 per hour. Downtime or slow speeds caused by DDoS attacks causes damage to reputation, customer churn and lost business.

Why Flashbox's On Premises Solution for your DDoS Protection?

- Protect your business from all kinds of DDoS threat with a purpose-built on-premises DDoS solution
- Benefit from maximum analytics and human expertise plus immediate intervention at the time of threat detection
- Real-time zero latency mitigation on the ground so DDoS attacks can be detected and re-routed immediately
- We partner with the industry's top vendors, including F5 Networks, Radware and Arbor Networks. We will guide you to the right solution to best suit your needs
- Our team of DDoS experts will properly configure your on-premises devices for maximum effectiveness

Key Benefits

- Robust DDoS Protection On Premises 
- Automatic Threat Detection
- Protection Against All Threat Types
- Real-time, Zero Latency Mitigation
- Human Expertise & Intervention
- Purpose-Built to Fit Your Needs

FLASHBOX ON PREMISES PROTECTION

Certain types of business, such as financial institutions and service providers, typically need to have their appliances on-premises either for compliance requirements or perhaps they want to manage the appliances themselves. Appliances come in a range of factors and pricing, and can be licensed with mitigation capabilities ranging from 500MBP to 40GBP.

Our on-premises solutions offer automated DDoS defense and mitigation from all kinds of DDoS threat, from fast-moving high volume floods to very short duration threats, including IoT-based attacks like Mirai or Specter, to sophisticated attack techniques related to Permanent Denial of Service (PDoS) or Ransom Denial-of-Service (RDoS).

On-premises protection typically offers an added level of granularity to the analytics process, which is required for defeating certain kinds of multi-layer attacks. It also offers real-time, zero latency/delay mitigation through a layer of human intervention that cloud-based DDoS scrubbing doesn't typically provide.

Flashbox can help you design, plan and procure your on-premises solution, customizing what you need by partnering with the industry's top vendors, such as Arbor, Radware and F5. Our highly experienced team of DDoS experts will also properly configure these devices for optimal performance and effectiveness in protecting your organization against the most dangerous kinds of DDoS attack.

ABOUT FLASHBOX

Here at Flashbox, we **offer real-time threat detection and proactive monitoring** with personalized enterprise control. With precise threat assessments and timely responses, **Flashbox has only one mission: to keep your data safe and secure, 365/24/7.**

Other Flashbox Options

Cloud Protection

Benefit from our singular cloud protection solution underpinned by AWS' global infrastructure. Protect your website, infrastructure & applications at scale.

Hybrid Protection

On-premises protection at the appliance level combined with cloud-based mitigation.

Professional Management & Planning Services

Let our team of experts manage your top-level DDoS solution. Our professional services can help you design, procure, budget, implement and manage your needs.
